PREFACE.

The tables contained in this book are constructed on the same plan as those for 4, 4½, 5, 6 and 7 per cent. by the same author published in 1880. Those tables are highly esteemed and recommended by many of the largest monied institutions and business houses; including Bankers, Merchants and Manufacturers, in the United States and Canada.

Enquiries have come from many places, both West and South, for tables of interest, similar to those, with rates higher than 7 per cent. Those enquiries have led to the preparation and publication of the book herewith presented.

It contains two sets of tables for each rate of interest.

The first sets each contain 365 tables or one for each day in the year, and the interest for any given number of days is for so many 365th parts of a year and is calculated by the proportion which such number of days bears to 365. This is the only true and equitable method of computing interest.

The second sets each contain 360 tables, arranged for months and days, and should be used only in computing interest for calendar months, and days less than a month, in accordance with the Statute of the State of New York which is printed on the following page.

The year contains 365 days. Therefore when interest is calculated on the arbitrary assumption that 360 days constitute a year, each day is treated as the 360th part of a year and the sum of interest is one seventy-third ($\frac{1}{73}$) too much.

The plan on which these tables are made, presents a great deal of matter in a small space, and thereby avoids the necessity of a large and cumbersome book, and also facilitates rapid and correct work in computing interest.

PLAN OF THE TABLES.

EACH table consists of 10 lines. The first nine lines contain 8 figures, running horizontally. The first or index figures, 1, 2, 3, 4, 5, 6, 7, 8, 9, forming a perpendicular column, represent dollars, from units to 10's, 100's, 1000's, 10,000's, 100,000's. The remaining 7 figures in each line, after the index figures are decimals, and express, first: the interest on the sums represented by the index figures or units; then by moving the decimal point, or the point that divides dollars from cents, one figure to the right, we have in regular succession the interest on the 10's, 100's, 1000's, 10,000's and 100,000's of dollars, indicated by the index figures. In other words, for each 0 placed to the right of the index figures, move the decimal point one place to the right.

The 10th lines have no index figures. They express in dollars and cents the interest on $1,000,000 for the number of days at the head of each table under which they are respectively placed.

Examples from the 365 day tables at 6 per cent.

EXAMPLE 1.

The first line of the table under 63 days is 1.0103562.

By that table the interest for $1 is	.01
$10 is	.10
$100 is	$1.04
$1,000 is	$10.36
$10,000 is	$103.56
$100,000 is	$1,035.62
$1,000,000 is	$10,356.16

and so for every table and every line in the book.

NOTE.—When the mills (i. e. the 3d figure to the right of the decimal or dividing point,) equal or exceed 5, add 1 to the cents as is done in above example where the interest on $100 being $1.03c. 5m. is stated as $1.04.

The above example shows the working of the tables and the method of computing interest on even sums, or sums that have but one significant figure.

EXAMPLE 2.

Showing the working of the tables in computing interest on sums where the units, tens, hundreds, thousands, etc., are represented by significant figures.

Required the interest on $5,846.28 for 63 days at 6 per cent.

$5,000	$51.780
800	8.284
40	.414
6	.062
$5,846	$60.540

The above Example 2, illustrates the principles of the table and how the interest is obtained on a composite sum, or a sum composed of many significant figures. But it is not given as the sole method for computing interest by these tables. The tables are so compact and occupy so small a space that persons with any aptness for figures or who have frequent occasion to calculate interest can, in most cases, see at a glance what is the interest on a sum containing two, three or four significant figures and write the sum of interest down at once without any other figuring or addition.

EXAMPLE 3.

To compute interest on $5,846.28 for 63 days at 6 per cent.

A Person with a pen or pencil in the right hand can place a finger of the left hand at the eighth line of that table and say or think 8.28, then at the 4th, and say or think 8.70, then at the 6th, and write down $ 8.76, the interest on $ 846
then at the 5th, and write down 51.78, the interest on 5,000

$60.54	$5,846.28

This method can be applied in many cases to sums of four figures. And there is no doubt that interest can be calculated faster with this book than by any other book or method.

TO CALCULATE INTEREST ON STERLING MONEY.

Interest on Sterling money can be easily and quickly calculated by these tables.

NOTE 1.—That the interest on tenths of a dollar, or of a pound is found by removing the decimal point one place, and for hundredths, two places, to the left; and as that one shilling is one-twentieth of a pound, it is also five-hundredths.

NOTE 2.—That in calculating interest on Sterling, days are taken at their true value, viz: as 365ths of a year.

Therefore, to calculate interest on Sterling money by decimal tables; reduce the shillings to decimals of a pound by multiplying them by .05, find the interert in the 365 day table on the sum of pounds as for the same sum of dollars, and on the decimals as for so many tenths or hundredths, and the sum of interest will be stated in pounds and decimals of a pound. To reduce the decimals to shillings and pence, divide the first two figures by 5, the quotient will be shillings; carry the remainder to the third figure and divide by 4, the quotient will be pence, and the required sum is stated in £. s. d.

Division by the above method can be performed mentally and therefore quickly. [The true divisor for the remainder is $4\frac{1}{6}$, this difference is so small as to not appreciably affect the result.]

EXAMPLE.

Required the interest on £416..7 @ 5 per cent. for 95 days.

£416..7 = £416.35	Interest	£400	£5.2055
		10	.1301
		6	.0781
		.35	.0045
			£5.4182

Answer £5..8..4.

Required the interest on £1 000 for 106 days.

Interest from table £14,521

Answer, £14..10..5.

When the sum on which interest is required includes pence if less than 6, drop them, if 6. or over, add one to the shillings. If the sum is in pounds only, it is only necessary to take three decimals.

The arithmetical rule for reducing decimals of a pound to shillings and pence, is to multiply them by 20, and from the product cut off as many figures, counting from the right, as there are figures in the multiplicand; the figures remaining to the left are shillings: then multiply the figures cut off by 12, and from the product cut off as many as before, the figures remaining are pence.

EXAMPLE.

To Reduce £5.4182 to £. s. d.	To Reduce £14.521 to £. s. d.
20	20
8.3640	10.420
12	12
4.3680	5.040
Answer, £5..8..4.	Answer, £14..10..5.

This Rule requires some figuring which is wholly dispensed with in the mental process.

Interest at Six per Cent on any Sum from $1 to $1,000,000.—365 days.

TABLES OF COMPOUND INTEREST, DISCOUNT, &c.

Rates for ½, 1, 1½, 2, 2½, 3, 3½, 4, 4½, 5, 5½, 6, 6½, 7, 7½, 8, 8½, 9, 9½ and 10 per cent.

THE FIRST 10 RATES FROM 1 TO 100 YEARS.

THE LAST 10 RATES FROM 1 TO 50 YEARS.

TABLE No. 1.

Amount of ONE DOLLAR at Compound interest at all above rates.

TABLE No. 2.

Amount of ONE DOLLAR per annum at all above rates.

TABLE No. 3.

Present Value of ONE DOLLAR due in any future year at all above rates.

TABLE No. 4.

Present Value of ONE DOLLAR per annum at all above rates.

TABLE No. 5.

Annual payment which will pay a debt now due and its interest in any required number of years.

TABLE No. 6.

Annual payment or Sinking Fund that will equal and cancel a debt at its maturity.

These Tables will be found to be very valuable and of great service to Officers of Financial Institutions, Business Men and Accountants generally.

From them can be determined :—

1st.—The amount to which any stated sum will increase in any given time, if compounded annually, semi-annually or quarterly.

2nd.—The total sum of a series of annual. semi-annual, or quarterly payments, invested and compounded at any stated rate of interest for any stated period of time.

3rd.—The present value of any sum due at a future time.

4th.—The present value of a series of future payments.

5th.—The annual payment required for a Sinking Fund that shall equal and pay a debt at its maturity.

6th.—The annual net income that must be received from a building erected on leased ground, in order to realize a certain rate per annum, on the sum invested, and also create a fund that at the expiration of the lease will equal the cost of the building.

7th.—The sum to be deposited in a Savings Bank or Trust Company, or otherwise invested, at any specified rate of interest in order to insure a certain specific sum at a given future time.

8th.—The annual income to be realized from Bonds purchased at a premium or discount.

And many other answers to questions of a similar nature.

NOTE.—The sums stated in these tables are the amounts or values of $1.00 at the rates under which they are placed, and for the number of years (or terms) to which they are opposite. Hence:

RULE I.

To obtain the amount or value of a stated sum for a given time at a given rate:—Multiply the stated sum by the amount or value of $1.00 for the same time and rate.

NOTE.—Calculations relating to Compound Interest, Discount, &c. are based upon interest becoming due at the end of certain regular terms (or periods of time) and placed at interest, so that at the end of each term the sum at interest is increased. Such terms may be for any time; usually they are annual, semi-annual or quarterly. Hence:

RULE II.

To obtain the required amount or value of a given sum for a stated number of years at a stated or given rate PER ANNUM, payable, SEMI-ANNUALLY, or QUARTERLY: Take the rate of interest that is one-half, or one-quarter of the stated rate per annum, and for two or four times the number of years stated.

EXAMPLES.

1. Required the amount of $10,000 in 20 years at 5 per cent. Compound Interest. See Table No. 1. The amount of $1.00 in 20 years at 5 per cent. is $2.653298 $2.653298 x $10.000=$26532.98 the sum required.

---

2. Required the amount of $5000 in 4 years at 5 per cent. compound interest per annum payable semi-annually. See Table No. 1. The amount of $1.00 at 2½ per cent. for 8 years is $1.218403. $1.218403 x $5000=$6092.02 the sum required.

---

3. Required the amount of $1200. per annum for 4 years paid quarterly and improved at 6 per cent. See Table No. 2. The amount of $1.00 at 1½ per cent. for 16 years is $17.932369. $17.932369 x $300=$5379.71, the sum required.

---

4. Required the present value of $3000, due in 5 years, discounted at 6 per cent. See Table No. 3. The present value of $1.00 due in 5 years at 6 per cent. is .747258. .747258 x $3000=$2241.77, the sum required.

---

5. Required the present value of $750. per annum for 2 years payable quarterly, discounted at 6 per cent. See Table No. 4. The present value of $1.00 per annum for 8 years at 1½ per cent is $7.485925. $7.485925 x $187.50=$1403.61, the sum required.

---

6. Required the net annual income from a building erected at a cost of $40,000 on ground leased for 21 years in order to receive 6 per cent. per annum on said cost and also create a fund that will equal the said cost at the expiration of the lease. See Table No. 5. The amount that will pay a debt of $1.00 and its interest in 21 years at 6 per cent. is $.085005. $.085005 x $40,000=$3400.20, the sum required.

RULE III.

To find the principal which will amount to a required sum in a given time at a specified rate of Compound Interest. Divide the required sum by the amount of $1.00 for the same time and rate of interest required

EXAMPLES.

1. Required the sum that if improved at 5 per cent. will in 10 years amount to $10,000. See Table No. 1 The amount of $1.00 at 5 per cent. for 10 years is $1.628895. $10,000 divided by $1.628895=$6139.13, the sum required.

---

2. Required the sum to be deposited in a Savings Bank or Trust Company paying interest, semi-annually, at the rate of 4 per cent. per annum in order that a child 10 years of age will at the age of 21 receive $5000. See Table No. 1. The amount of $1.00 at 2 per cent. for 22 years is $1.545980. $5000. divided by $1.545980=$3234.20, the sum required.

RULE IV.

To find the rate of Compound Interest at which a stated sum must be invested in order that the Principal and Interest shall in a given number of years amount to a certain required sum. Divide the sum required by the sum to be invested. The quotient will be the amount of $1.00, for the required number of years, at the required rate of interest. Then in Table No. 1, on the line with the given number of years, find said amount or the sum nearest to it. The rate of interest at the head of the column containing said amount is the rate required.

EXAMPLE.

Required the rate of Compound Interest by which $800. will increase to $1200. in 7 years. Divide $1200. by $800. the quotient $1.50, is found in Table No. 1 on the line with 7 years in the column headed "6 per cent." 6 per cent. is the rate required.

NOTE. The amounts and the present values of $1.00 per annum, Tables Nos. 2 and 4 are based upon money to be paid at the END of each year or term.—The amount of $1.00 paid at the beginning of a year is, at the end of the year, $1.00 plus the interest. The present value of the first of a series of payments to be made at the beginning of the years is $1.00 without any discount. Hence:—

RULE V.

To obtain the amount of $1.00 per annum to be paid at the beginning of a given number of years. By Table No. 2, take the number of years, that is ONE MORE than the given number, and from the amount stated for that number DEDUCT $1.00.

To obtain the present value of $1.00 per annum to be paid at the beginning of a given number of years, by Table No. 4,—Take the number of years ONE LESS than the given number and to the value for those years add $1.00

EXAMPLES.

1. Repuired the amount of $1.00 per annum for 10 years to be paid at the beginning of each year and improved at 5 per cent. See Table No. 2. The amount of $1.00 per annum for 11 years at 5 per cent. is $14.206787. $1.00 deducted is $13.206787, the sum required.

2. Required the present value of $1.00 per annum to be paid at the beginning of each year, for 8 years discounted at 6 per cent. See Table No. 4. The present value of $1.00 per annum for 7 years at 6 per cent. is $5.582381. $1.00 added is $6.582381, the sum required.

---

3. Required the present value of a rental income of $100. per month payable in advance for three years discounted at 6 per cent. per annum. See Table No. 4. The present value of $1.00 per annum for 36 years paid in advance at 1½ per cent. is $28.075588. $28.075588. x $100. is $2807.56, the sum required.

NOTE. Table No. 6 for Sinking Funds is for payments made at the BEGINNING of each year. Sinking Funds are sometimes formed by setting aside a portion of the interest derived from an investment in Bonds. This is especially the case when Bonds are bought at a premium, therefore it is necessary in such cases to calculate for a Sinking Fund created by payments made at the end of the years or terms. Hence:—

RULE VI.

To determine the sum required to create a Sinking Fund by payments made at the end of each year or term for a given number of years and specified rate of interest, by Table No. 6. To the sum stated in that table for the given years and rate, add the interest on that sum for 1 year at the specified rate. By Table No. 5. From the sum stated in that table deduct the interest of $1.00 for one year at the specified rate.

EXAMPLES.

Required the annual payment to be made at the end of each year which at 5 per cent will amount to $1.00 in 6 years. By Table No 5. The sum at 5 per cent. for 6 years is .197017; this minus .05 is .147017, the sum required.

By Table No. 6, the sum at 5 per cent. for 6 years is .14002; this plus the interest on same, 1 year at 5 per cent. is .14702=.147017.

RULE VII.

To determine the sum which must be paid for a Bond bearing interest at a certain rate in order to realize another rate, either more or less, than that paid on the par value of the Bond.

Multiply the par value of the bond by the present value of $1.00 DUE in the same number of years as the bond has to run, and at the rate of interest proposed to be realized from the investment. Also multiply the annual interest paid by the bond by the present value of $1.00 PER ANNUM at the same proposed rate of interest and number of years as above. Add the two products; their sum will be the amount required.

EXAMPLES.

1. Required the sum to be paid for a $1.000, 6 per cent. bond having 20 years to run with interest payable annually in order to realize 4 per cent. per annum on the sum invested.

$0.456387,	present value of	$1.00 due in 20 years at 4 per cent	x $1000=	$456.387
$13.590326	"	$1.00 per annum " "	x 60=	$815.419
		Sum required,		$1271.806

2. Required the sum to be paid for a 5 per cent. bond for $1000. with 15 years to run and interest payable semi-annually in order to realize 4 per cent. per annum on the sum invested.

$0.552071 present value of $1.00 due in 30 years at 2 per cent. x $1000.=$552.071
$22.396456 " " per annum " " " 25.=$559.911

Sum required. $1111.982

---

3. Required the sum to be paid for a 6 per cent. bond for $1000. having 20 years to run with interest payable semi-annually in order to realize 7 per cent. per annum on the sum invested.

$0.252572 present value of $1.00 due in 40 years at 3½ per cent. x $1000.=$252.572
$21.355072 " " per annum " " " 30.=$640.652

Sum required, $893.224

---

4. Required the sum to be paid for a 7 per cent. bond of $1000. having 16 years to run with interest payable semi-annually in order to realize 10 per cent. per annum on the sum invested.

$0.209866 present value of $1.00 due in 32 years at 5 per cent. x $1000.=$209.866
$15.802677 " " per annum " " " 35.=553.094

Sum required, $762.960

Table No. 1--Amount of $1 at Compound Interest from 1 to 100 Years.
